THE MOBILE HYDRAULIC EXPERTS

FEBRUARY 2018

What makes for good service and repair?

Kraft Fluid Systems is a factory authorized service center for Danfoss Power Solutions, Oerlikon Fairfield, and Schabmüller Electric Drives in North America.

A repair or rebuild performed by an authorized service center offers your equipment longer life and better performance in your application through the utilization of factory trained technicians, genuine service parts, and a renewed factory warranty.

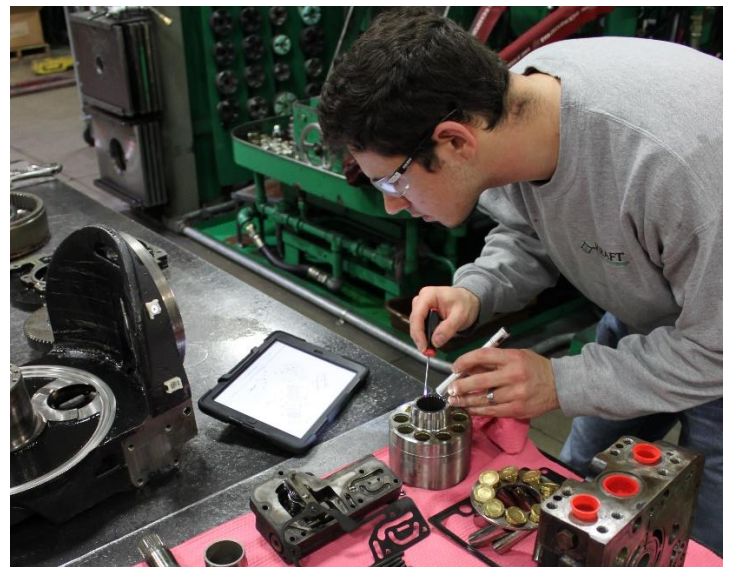

Factory Trained Technicians

Our service technicians are factory trained and certified to perform quality repairs and rebuilds just like the manufacturer. The employee-owners at Kraft are extensively trained in hydraulic systems, many of which are certified hydraulic professionals. We use the latest technology to keep the repair processes up to date and efficient.

“When your customer begins experiencing reduced machine performance, consider Kraft for your OEM service and repair needs.”
– Merit Shambarger, Kraft Service Manager

Genuine Service Parts

Kraft Fluid Systems sells, services, and inventories world-class mobile hydraulic equipment, and only uses genuine manufacturer's service parts while following factory approved rework specifications. We have one of the largest inventories of Fairfield Torque Hub, Danfoss Power Solutions, and Schabmüller service parts in North America.

Factory Warranty

The typical rebuild can offer a cost savings averaging 60-70% of a new replacement and carries a 12-month warranty for Fairfield and Schabmüller product, and an 18-month warranty for all Danfoss product.

Repair and rebuild is an excellent option to compete with new unit lead time. Kraft strives to stock the most commonly used service parts, allowing factory-quality component repair and rebuild to be performed in as little as two weeks.
