

KRAFT FLUID SYSTEMS

Presents

Systems Integration Capability

THE MOBILE HYDRAULIC EXPERTS

FEBRUARY 2019

Kraft Utilizes 45 Years of Mobile Hydraulic Systems Experience to Optimize Applications

Proper design of hydraulic and electronic control systems is vital to efficient, high-performing mobile hydraulic machinery. Each component must be correctly selected, sized, and integrated; errors may jeopardize a machine's performance, efficiency, and reliability. Correctly integrating mobile hydraulic systems and electronic controls involves knowledge and experience. Kraft Fluid Systems has the mobile systems expertise needed to ensure client's hydraulic and electronic control systems perform optimally and deliver the highest value to their end user.

Kraft Fluid Systems works with clients from initial design and specification through prototyping and production. Starting with a statement of work, Kraft will help select the correct components and hardware. Kraft engineers then program and develop software for specific application and client needs.

"Systems integration for mobile machinery is a core competency at Kraft. Our clients expect us to be knowledgeable, experienced, and practical with our solutions. Our experience, training, and success in this area is what sets us apart from other distributors."

-Scott Durand, Vice President Sales & Marketing

Kraft believes prototyping is critically important and strives to improve a client's time to market by providing full startup assistance. Whether it's fine tuning a system, testing, or

data acquisition, Kraft has the expertise and resources to support on-site client needs.

Once a system is transitioned to production, Kraft provides ongoing technical support, whether on-site or on-call, inventory support, sales support, and customer service – whatever is needed.

Benefits of Systems Integration with Kraft

Working with Kraft Fluid Systems offers key benefits for mobile OEMs, including:

- Precise selection and integration of hydraulic components, and electronic control hardware
- Programming and development of custom software to ensure optimal performance
- Prototype assistance to improve time to market and equipment success
- Continuing service through production and aftermarket support

Why Select Kraft for Systems Integration?

Kraft Fluid Systems has more than 45 years of experience in designing and maintaining mobile hydraulic systems. Their authorized sales and service center employs factory-trained and industry-certified sales professionals, engineers, and technicians for reliable support.
